# Codeblocks 与 Opency 的安装与配置

常琳 (整理) 2015 年 8 月

#### 目录

3	·····································	•
2	安装 opency	-
•		-

## 1. codeblocks 安装

1 codeblocks 安装

1. 安装基本编译环境

```
sudo apt-get install build-essential
sudo apt-get install
```

2. 安装 codeblocks sudo apt-get install codeblocks

## 2. 安装 opencv

1. 系统更新

```
sudo apt-get update
sudo apt-get upgrade
```

2. 安装必要的组件

常琳 (整理) · 1·

sudo apt-get install build-essential libgtk2.0-dev libjpeg-dev libtiff4-dev libjasper-dev libopenexr-dev cmake python-dev python-numpy python-tk libtbb-dev libeigen3-dev yasm libfaac-dev libopencore-amrnb-dev libopencore-amrwb-dev libtheora-dev libvorbis-dev libxvidcore-dev libx264-dev libqt4-dev libqt4-opengl-dev sphinx-common texlive-latex-extra libv4l-dev libdc1394-22-dev libavcodec-dev libavformat-dev libswscale-dev default-jdk ant libvtk5-qt4-dev

3. 编译 opecv3.0

```
进入解压后的 opencv3.0 目录
```

mkdir build

进入 build 目录

```
1 cd build
```

- 2 cmake -D CMAKE\\_BUILD\\_TYPE=Release -D CMAKE\\_INSTALL\\_PREFIX=/usr/local ..
- 4. 安装 opencv3.0

在 build 目录

(a) make

若 make 编译失败, 出现如下错误:

```
make[2]:*** [modules/java/core+Algorithm-jdoc.java] 错误 126
```

make[1]:\*\*\* [modules/java/CmakeFiles/opencv\_java.dir/all] 错误 2

make:\*\*\* [all] 错误 2

搜网上解决方案,把 CMakeLists.txt 里的有关 java 的 -java support-和 ==java== 部分删掉了,影响未知

- (b) sudo make install
- 5. 配置 opency.conf file, 加入环境变量

sudo gedit /etc/ld.so.conf.d/opencv.conf

在 opency.conf 里面加入命令

/usr/local/lib

 更新库目录

sudo ldconfig

### 3. 配置

1. codeblocks 链接库配置: Project->Build Options

test1(工程名称)->Linker settings

在 Link libraries 下面写

/../../usr/local/lib/libopencv\_core.so

 $/../../usr/local/lib/libopencv\_highgui.so$ 

以上仅是列举, lib 文件里的都要加进去

2. codeblocks 头文件目录配置 (pkg-config -cflags opency 结果)

test1->Search directories->Compiler

/usr/include/opencv

/usr/include/opencv2

include 里 opency 的包都要加上

安装好后,用 testprogram 里的.cbp 文件测试下
